

FOCUS ON BATTERY MINERAL EXPLORATION

January 2022

COMPANY OVERVIEW

Vision Lithium is a junior exploration company focused on exploring and developing high quality battery mineral assets including lithium and copper in safe jurisdictions, primarily Canada. The Company is led by skilled and qualified mineral exploration and business professionals with a deep understanding of the lithium battery materials market which is driven by lithium-ion batteries. Vision Lithium is committed to discovering new world class assets and bringing these assets to production, starting with its flagship project, the Godslith lithium property located in Manitoba, the newly acquired Cadillac Lithium property, the Sirmac lithium property and the Dome Lemieux copper property located in Québec Canada, as well as its polymetallic properties (Cu-Zn-Ag, Ni-Cu-Co) in New Brunswick.

Properties	Commodity	Ownership	Area (ha)
Godslith –MB	Lithium	100%	5,560*
Cadillac –QC	Lithium	100%	18,266
Sirmac –QC	Lithium	100%	7,750
Dome Lemieux –QC	Copper	100%	12,714
Red Brook Benjamin –NB	Copper, Zinc, Silver	100%	5,817
St. Stephens -NB	Nickel, Copper, Cobalt	50%	4,298

• Application for Mineral Exploration License pending

100% OWNED LITHIUM PROJECTS

GODSLITH LITHIUM, MANITOBA

PROJECT HIGHLIGHTS

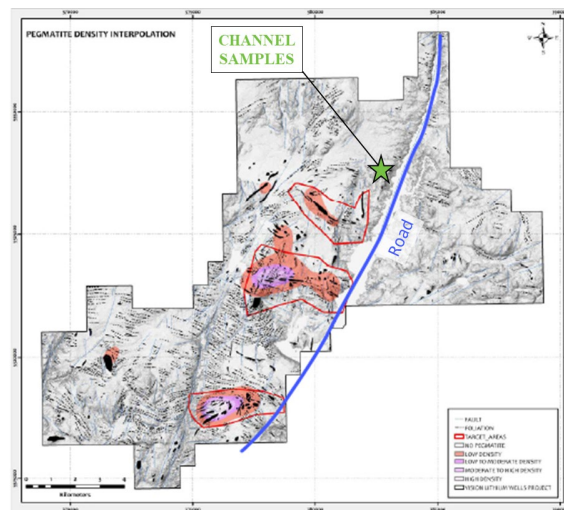

- Mineralized Pegmatite mapped over >2 km.
- Homogenous and continuous mineralization 1.54% Li₂O at surface and similar grade of 1.54% in deepest hole at only 243 m of depth
- Suggests mineralization at depth similar to surface and opportunity to significantly increase historical resource*
- 4.8 Mt @ 1.27% Li₂O historical indicated and 4.6 Mt @ 1.14% Li₂O historical probable*

CADILLAC LITHIUM, QUÉBEC

PROJECT HIGHLIGHTS

- 332 claims covering 19,070 ha
- 4 dykes recognized
- Dykes spaced 100 m apart
- Lithium observed in all dykes
- Large Spodumene crystals locally
- Few samples ever taken
- Never drilled

SIRMAL LITHIUM, QUÉBEC

PROJECT HIGHLIGHTS

- Sirmac contains historical resource of 185,000 t of measured resources at 1.40% Li₂O, 79,000 t of indicated resources at 1.40% Li₂O, and 40,000 t of inferred resources at 1.10% Li₂O *
- Located about 180 km NW of Chibougamau, in the province of Québec
- Large land package consisting of 155 mining claims (7,750 ha i.e., 78 km²) with opportunity to host multiple other spodumene bearing dykes given its proximity to other large high grade lithium project in Quebec

* While the Company considers these historical estimates to be relevant to investors, as they may indicate the presence of mineralization, a qualified person has not done sufficient work for Vision Lithium to classify the historical estimates as current "mineral resources" or "mineral reserves" (as defined in NI 43-101).
